

Abstract of the Disclosure

1 A method and computer program for managing and presenting a visual history
2 of web pages accessed by a user. This method and computer program is able to
3 create a screen of thumbnail snapshots of web pages for presentation to a user. These
4 thumbnail snapshots are reduced images of the actual web pages themselves that the
5 user has visited. Associated with each thumbnail snapshot is a universal resource
6 locator for the web page. The history of the web pages visited may be displayed in a
7 toolbar which is scrollable.
